FEATURED PROJECT 01 / INDEPENDENTLY DEVELOPED

TramitIA

AI-powered assistant for municipal procedures in Santa Cruz de la Sierra, Bolivia.

The challenge

Municipal information is scattered across procedures, forms and administrative sources. Citizens need step-by-step guidance without speculative requirements.

Engineering approach

Built a retrieval-augmented assistant using FastAPI, LangGraph, PostgreSQL / pgvector, semantic search and a Next.js interface.

Quality & trust

Responses reference procedure records and flag uncertain details; relevance thresholds, source checks and focused retrieval tests improve reliability.

LIVE PILOT / OPEN

REAL PRODUCT SCREENSHOT / CITIZEN QUESTION ENTRY

Citizens can describe their situation, attach a photo, or use guided options to find a relevant municipal procedure.

STACK Python · FastAPI · LangGraph · Gemini · PostgreSQL · pgvector · Next.js · AWS · Docker

Live pilot URL supplied by author; availability may vary.

REAL INTERFACE GALLERY / TRAMITIA

Guidance built around citizens

Topic discovery, frequent questions and careful follow-up when municipal records are incomplete.

GUIDED SEARCH & TOPICS

SOURCE-AWARE CHAT

The chat visibly distinguishes documented requirements from information that still needs confirmation.

FEATURED PROJECT 02 / INDEPENDENTLY DEVELOPED

AcademIA

A unified discovery and comparison platform for university education in Bolivia.

The problem

University programs appear across disconnected websites and channels, making comparison across institutions difficult.

What I built

A searchable undergraduate and postgraduate catalog with university browsing, side-by-side program comparison and account-specific experiences.

Key technical decisions

Normalized heterogeneous program data, distinguished verified details from unconfirmed enrollment information, and built structured filters backed by PostgreSQL.

CAPTURED CATALOG: 1,050 PROGRAMS / 16 UNIVERSITIES

REAL PRODUCT SCREENSHOT

Search, browse, and compare degrees across institutions from one interface.

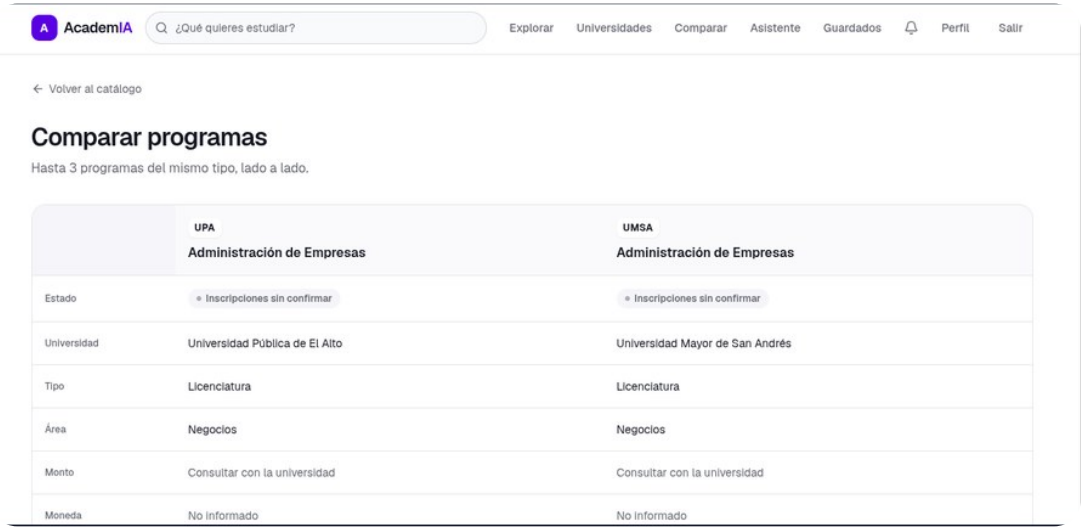

STACK Next.js · React · PostgreSQL · Supabase · Docker · AWS · data normalization

Catalog figures reflect the supplied screenshot, not an independently checked current count.

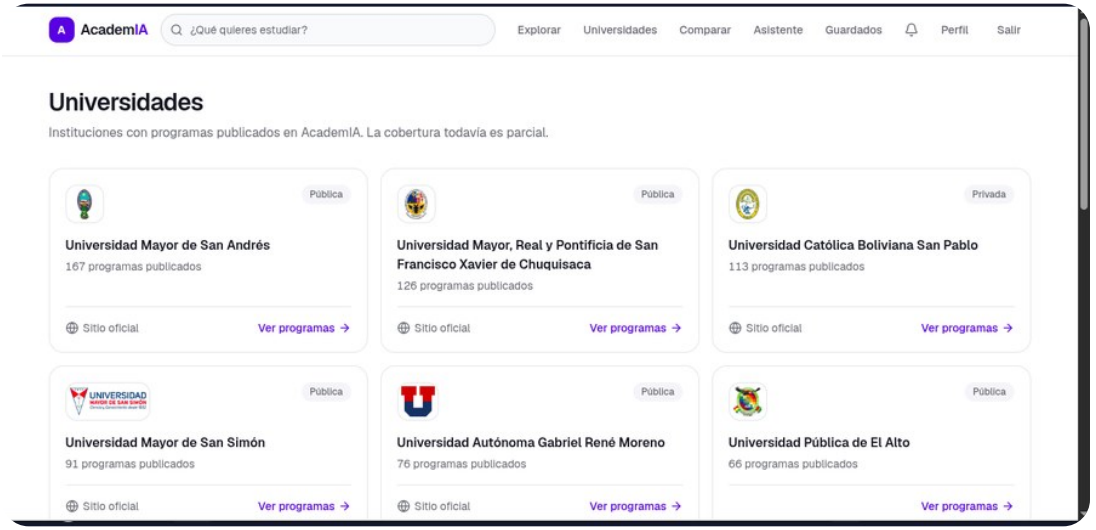

REAL INTERFACE GALLERY / ACADEMIA

Explore. Compare. Decide.

A program comparison view and a curated university directory from the actual application.

SIDE-BY-SIDE PROGRAM COMPARISON

BROWSE UNIVERSITIES

Product focus Helping prospective students compare academic options, review publication status and navigate offerings from multiple institutions without switching between websites.

FEATURED PROJECT 03 / NO COUNTRY FELLOWSHIP

Partner Intelligence

Decision-support platform for researching and prioritizing strategic partnerships.

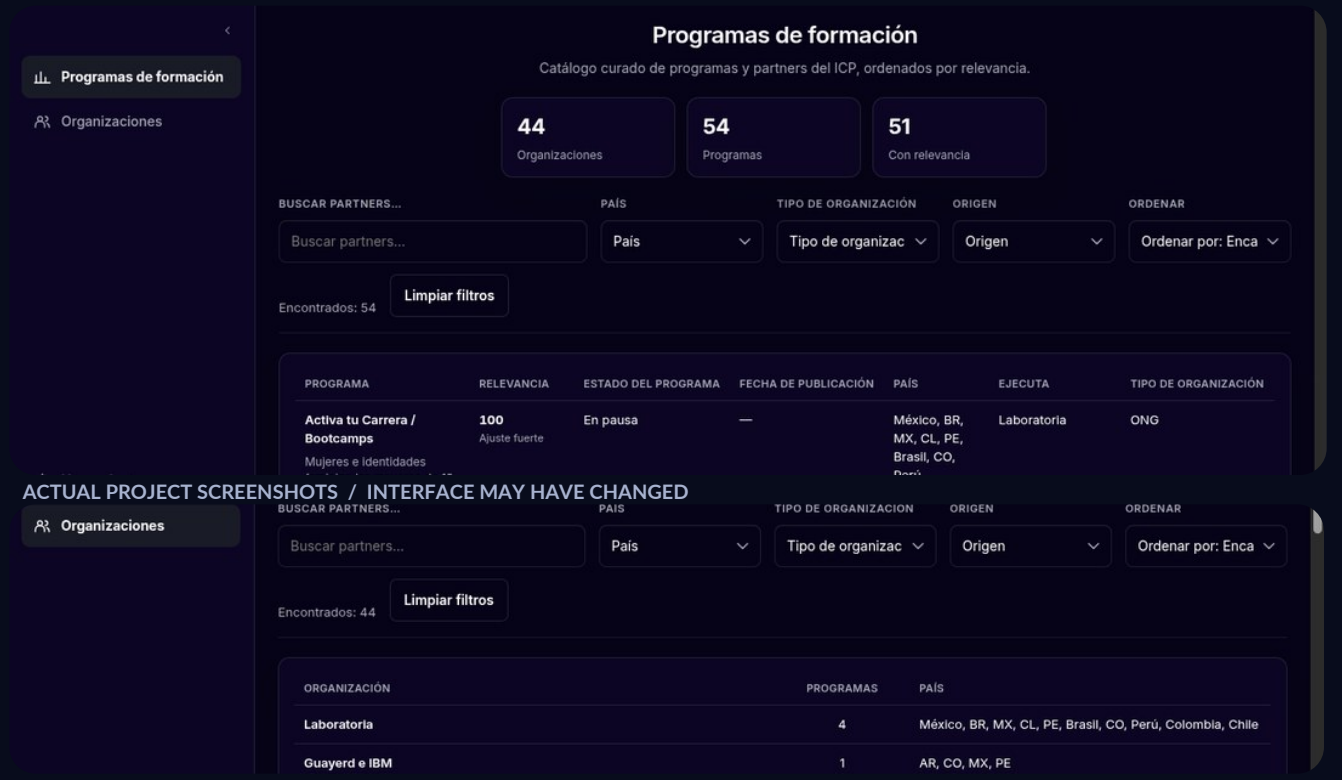

CONTRIBUTION

Data & BI Fellowship contribution: defining and validating evaluation criteria, source evidence, weights, and analytical decision logic.

ENGINEERING PRINCIPLES

- AHP / TOPSIS scoring is deterministic; LLM output does not create numerical ranks.
- Incomplete evidence requires explicit review and traceable source references.
- Partner fit and program opportunity are scored separately.

LIVE PLATFORM (INVITE ONLY)

Deployed URL provided by author · Commercial access uses invitation-based login.

APPLIED AGENT ARCHITECTURES / COLLABORATIVE

AutoStory Builder

A multi-agent B2B content platform with brand-specific retrieval and human approval workflows.

System design

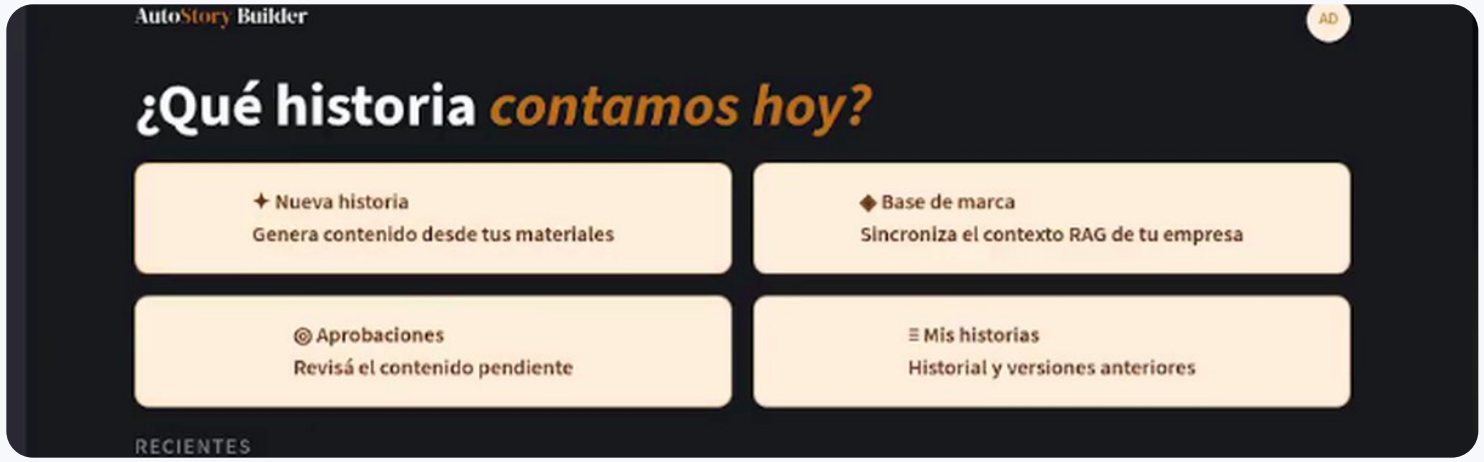

Five-stage LangGraph workflow with retrieval, analysis, writing, QA and finalization. The model generates content, while rule-based and model-based checks review outputs.

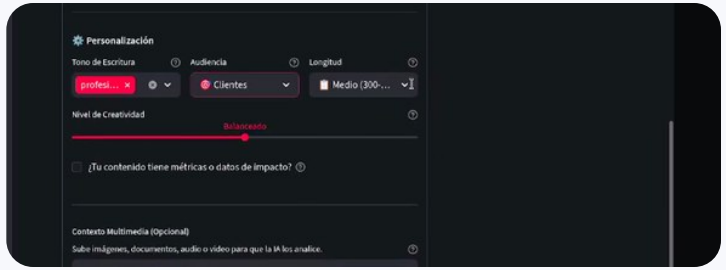

Security & product

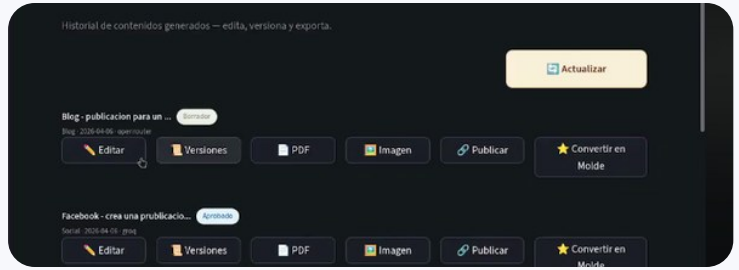

Tenant-isolated data with Supabase RLS, semantic search via pgvector, brand contexts, versioned stories and approval workflows.

Python · FastAPI · LangGraph · Cohere · Groq · Supabase · Redis · Streamlit

VIEW SOURCE CODE

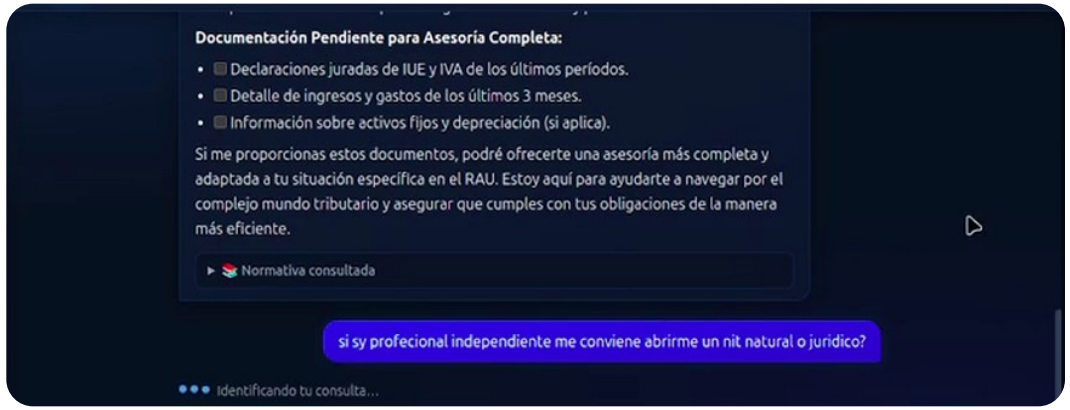

SELECTED APPLIED AI PRODUCTS

AuditorIA & Talentify

Two different uses of AI: verified document guidance and labor-market data intelligence.

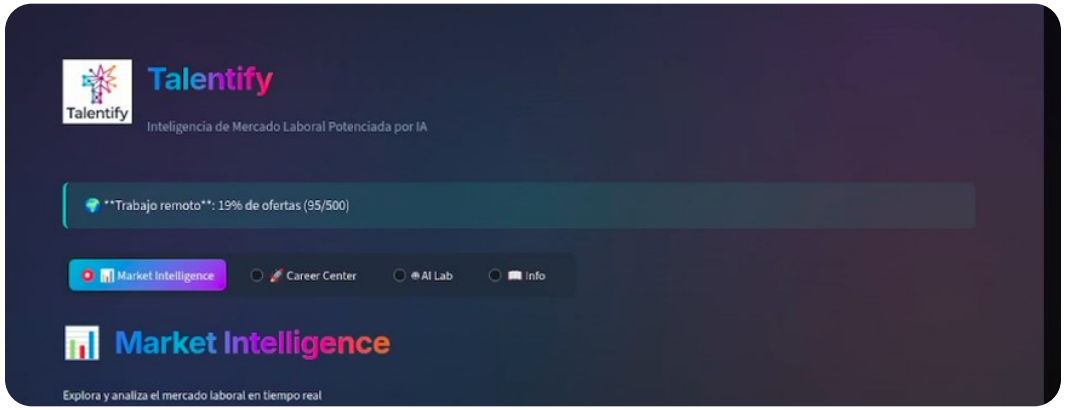

AUDITORIA / TAX & AUDIT RAG

Collaborative assistant for Bolivian tax and audit questions. Combines document retrieval, source-grounded answers and a conversational interface.

Stack: n8n · LangGraph · Supabase · Groq · Next.js

VIEW GITHUB

TALENTIFY / MARKET INTELLIGENCE

Collects public job postings across multiple APIs to analyze skill demand, salary patterns and market trends, supported by RAG queries.

Stack: Python · MongoDB · LangChain · Groq · ChromaDB

VIEW GITHUB

COLLABORATIVE SYSTEM / NO COUNTRY

Feedback Classifier

ARCHITECTURE CONCEPT

Inputs include WhatsApp, forms, web and manual submissions. Orchestration and validation feed classification and analytical views.

VIEW GITHUB

Illustration provided by author; dashboard figures shown are design examples, not verified KPIs.

ADDITIONAL ENGINEERING PROJECTS

Agents + Predictive ML

More code-backed examples of applied machine learning and resilient software architecture.

QUIPU AI

Messaging-based virtual manager

A ReAct-style agent connects WhatsApp / Telegram to sales, inventory and reporting workflows, with webhook security and automated tests.

Python · FastAPI · LangGraph · CI/CD

GITHUB REPOSITORY

TRUSTSCORE

Credit risk + document validation

Uses a language model to validate financial documents and XGBoost to estimate risk; conflicting decisions can be escalated to human review.

Python · XGBoost · LangGraph

GITHUB REPOSITORY

INVENTORYIQ

Demand forecasting

ETL from transactional data, lag and rolling features, forecasting evaluation, and low-latency inference exposed through a REST API.

Pandas · XGBoost · FastAPI · Supabase

GITHUB REPOSITORY

Repository links are public; a production deployment is not claimed for these projects.

COLLABORATION / CONTACT

Let us build reliable AI.

Backend engineering, AI agents, data systems and applied machine learning.

CORE STACK

Python · FastAPI · SQL · PostgreSQL

LangGraph · RAG · pgvector · Multi-agent

Pandas · XGBoost · TensorFlow · ETL

Docker · AWS · GitHub Actions · Supabase
